Jay Alfer — Technical Support Doc. Administrator

TO: Parts & Service Managers

DATE: July 22, 2002

SUBJ: **Austin Powers CPU Game ROM v3.01 Bug.**

First Please Note:

If you currently have **Austin Powers CPU EPROM (Game ROM) v3.00, you're fine**. *The optional new version 3.01 created,* was to enhance switch closures allowing for a smoother playing game. *However, if you currently have v3.01, you will* ***need to replace it*** *with* ***v3.02.***

Symptom:

With **CPU/OPSYS EPROM (Game ROM) U210 v3.01** in place on the CPU/Sound Board: If the player does not acheive (score) the **Skill Shot*** and the ball subsequently drains, the ball will be put back in play repeatedly without advancing to the next ball. *** Austin Powers Skill Shot:** *The opening shot from the plunger at the beginning of each ball, closing either Top Lane Switch #47 or Switch #48.*

Explanation:

This version of software had an unforseen bug which has been exterminated in v3.02. ***This is a software problem ONLY with version 3.01.***

Solution:

Replace only the **Game ROM** with **v3.02** in the **U210** position on the **CPU/Sound Board**. This Game ROM is available from our distributors or can be downloaded for free from our web site. *To find a local distributor or to download, visit www.sternpinball.com.*
